

SUMMARY

Aspiring AI/ML professional with a strong foundation in Computer Science and hands-on experience in developing intelligent applications using Python, Machine Learning, and Generative AI models. Eager to contribute to global research environments, especially in AI-driven innovation, by combining technical expertise with creative problem-solving.

SKILLS

AI/ML Tools & Libraries:

Python, NumPy, Pandas, Scikit-learn, OpenCV, TensorFlow, PyTorch

Generative AI & LLMs:

Transformers, HuggingFace, ChatGPT APIs

Database Management:

MongoDB, MySQL, Firebase

Web Tech for AI Prototyping:

Next.js, React.js, JavaScript, HTML/CSS

Version Control System:

Git and GitHub

LANGUAGES

English | advanced

Hindi | native

EXPERIENCE

Self Learner AI/ML Developer

Jul 2024 — Present

- Built a Virtual AI Painter that tracks finger gestures and allows drawing in real-time using OpenCV and MediaPipe.
- Developed AI applications using Generative AI models for text generation, summarization, and chatbot creation.
- Created ML models for classification tasks like spam detection and medical diagnosis using Scikit-learn.
- Worked on real-time deployment of AI apps using Streamlit and Firebase.

Web Developer Intern

Sep 2023 — Mar 2024

APOLIUMS INFOTECH INDIA PRIVATE LIMITED

- Collaborate within an Agile team structure with developing code using technologies such as: React, JavaScript, Node.js, APIs.
- Worked on a Team Project called "E-Recruitment Process" and contribute with good development ideas.
- Knowledge of JavaScript libraries to create rich interactive content.
- Work cross-functionally with Product Designers & Managers, and other Engineers to deliver exciting user-facing products.
- Develop web applications using Node, Express, JavaScript and React with provided specifications/wireframes and backend webs using Node.js.
- Bridge the gap between graphic design and technical implementations.
- Redesign and develop existing websites.
- Assist team with testing code in multiple browsers.

EDUCATION

Bachelor of Technology - Computer Science Engineering

Aug 2023 — Present

Bennett University(Times of India), Greater Noida with 8.24 CGPA

PROJECTS

**Multiple Disease Prediction (Streamlit App)** - Built and deployed a web app to predict Diabetes, Heart Disease, and Parkinson's using ML models. Used Scikit-learn, Pandas, and Streamlit for real-time predictions with user input.

**Virtual AI Painter (Real-time Hand Gesture Drawing)** - An OpenCV-powered app where users draw in the air using finger gestures. Integrated camera feed, pointer tracking, and gesture recognition.

**Code-Stream** - A code collaboration app with real-time syncing of data using multiple users. Built using React, Express, Node.js and socket.io for allowing synchronous interaction between users.

**Food Stack** - A MERN stack application for ordering food online. This project is designed to provide a seamless and efficient platform for users to order food from their favorite restaurants.

**Spam Mail Predictor** - Developed a Naive Bayes classifier that identifies spam emails with high accuracy using NLP preprocessing techniques.
